

JOSE PABLO SAMANO SUAREZ

Computer Science Student · Software Engineering · Cybersecurity · Full-Stack Product Systems
Wolfville, NS / Mexico City · jpss2004@icloud.com · linkedin.com/in/jose-pablo-samano-suarez · github.com/jpss2004-bot · jpsamanosuarez.com
Canadian study permit, co-op eligible · Mexican citizen · Available: flexible

PROFILE

Computer Science student at Acadia University and sole developer of three systems in real use: **CheckWise**, a REPSE compliance platform reviewing ~50 documents a day for 7 client companies; **Verifaid**, which rules on whether a signature can legally proceed, 50+ operations cleared; and **SAVR**, a live recommendation platform.

MAIN PROJECTS

CheckWise — REPSE Compliance Platform LegalShelf · 2026–Present
7 clients, 15+ vendors, ~20,000 documents | Python, FastAPI, TypeScript, React 19, Next.js 15, PostgreSQL, SQLAlchemy, Alembic, pytest

- Built the FastAPI backend and Next.js 15 / React 19 frontend covering evidence intake, reviewer adjudication, and portfolio-wide risk views, with JWT auth and role-based access.
- Modeled REPSE obligations as institution × cycle (SAT, IMSS, INFONAVIT, STPS) so the operating calendar and expediente gates derive from the data model.
- Shipped an AI-assisted reports centre guarded by an AI-safety suite inside 320+ backend tests. Reviewers now clear ~50 documents a day at about a minute each.

Verifaid — Signing-Authority Verification LegalShelf · 2026–Present
SaaS, 50+ operations for a paying client | Python, FastAPI, SQL, LLM-assisted extraction, registry lookups

- Automates a manual legal check for fintech and deal workflows: extracts data from corporate documents and powers of attorney, cross-checks it against public registries, and flags discrepancies under Mexican law.
- Returns a decision, not a report: whether signing can proceed, why it cannot, and who holds the authority to sign.

SAVR — Context-Aware Dining Platform Founder · 2025–Present
10 active users | Python, FastAPI, TypeScript, React, SQL, Vercel | context-aware-dining-platform-1.vercel.app

- Ranks venues on preferences, budget, social context, and intent, and states why each result fits, through Describe Your Night, Build Your Night, and Surprise Me flows.
- Maintains an AI-updated database of ~50 restaurants within 30 miles of Wolfville, NS, serving 10 active users.

EXPERIENCE

Software Developer, LegalShelf Mexico City / Remote · 2026–Present
Sole developer of both production systems — data model, API, AI features, access control, interface — working directly with the compliance side of the business.

Cybolt Academy Participant, Cybolt Mexico City · May–Sep 2025

- Hands-on workshops on MITRE ATT&CK, ICS/OT security, cyber kill chain, and incident response; applies the same threat-modeling approach to the document pipelines and access control at LegalShelf.

Data Processor, LegalShelf Mexico City · May–Aug 2023
Digitized and organized legal documents with structured metadata — the manual work the current systems automate.

EDUCATION

Bachelor of Science, Computer Science, Acadia University Wolfville, NS · Expected May 2027
Coursework in software engineering, databases, systems analysis, cybersecurity, and secure application design. Trinity College School, Port Hope, ON, 2023.

SKILLS & LANGUAGES

Software Python, Java, JavaScript/TypeScript, C, C#, SQL, React, Next.js, FastAPI, Flask, REST APIs, Git
Data & delivery PostgreSQL, SQLite, SQLAlchemy, Alembic, data modeling, metadata extraction, testing, Vercel, Render
Security JWT auth, role-based access control, threat modeling of document pipelines, incident response, MITRE ATT&CK, ICS/OT security
Training CompTIA Security+ and CySA+ coursework, COMP 601 Cybersecurity Fundamentals
Languages Spanish native, English C2, French A2

ADDITIONAL PROJECTS

ER Triage & Queue Manager (2025) Emergency-room queue workflow with ESI v4 acuity scoring and dashboard visibility; Python, NiceGUI, SQLite.
Family Phrase Game (2026) Deployed Flask party game.
